

LEARN

Color, juice, and the body.

Genetics is named for the colors of fruits and vegetables — and for the work our bodies already do.

Our skin, organs, and internal systems reflect our health. The liver and kidneys work hard to eliminate toxins. Juice will not replace medical care. It is one way to eat more plants. Read the [disclaimer](#) and [FAQ](#) before a cleanse.

The colors of the plants are the colors in the bottle.

When color can be a signal

Often, when you get sick, colors such as yellow, green, red, blue, and purple can indicate signs of illness, infections, or underlying conditions. That is a reason to talk with a healthcare provider — not a diagnosis from a juice bottle.

Detoxing and cleansing

Detoxing is about reducing exposure to harmful substances. Cleansing is a short, focused way of eating — often a juice plan — to support digestion and energy. Choose based on your goals, and consult a healthcare provider, especially if you are pregnant, on medication, managing diabetes, or considering this for a child.
